

ACO National Conference press release

Have you purchased a ticket to the premier continuing education event for 2015? A lineup of fascinating speakers will converge on the MCG for the ACO National Conference on 24 & 25 October to inform you, stimulate your awareness and challenge your views!

Sue Ormonde will fly across the Tasman to get the ball rolling with her keynote address on the refractive treatment of keratoconus. She will be back later to encourage you to participate in a discussion on cutting-edge treatments in anterior segment surgery. Last but not least Sue will return to the stage on Sunday afternoon for the concluding lecture of the conference and we predict that you will view cataract surgery in a new light!

The phrase 'New modes of drug delivery' perhaps conjures notions of some nefarious activities! Hong Zhang, the keynote speaker on Sunday, will gladly dispel such notions during this fascinating discussion.

Are there solutions for all contact lenses or for all contact lens problems? Roman Serebrianik, the ACO's own Head of Primary and Specialist Care Services, will facilitate this highly interactive session during which Eric Papas and Russell Lowe - will encourage you to learn and to contribute to the science, art and craft of contact lens management!

The diverse range of topics on Saturday that also includes nanomedicine, RGP lens fitting and neuro-ophthalmology will entice you to return early on Sunday morning to be absorbed by the history of ophthalmic

medicine. During the rest of the day you can learn more about AMD, skin conditions and corneal surgery.

The ACO National Conference has something for everyone, including a cocktail party on Saturday afternoon to launch Professor Barry Cole's book 'History of Australian Optometry'.

We look forward to seeing you at the ACO National Conference on 24 & 25 October being held at the Melbourne Cricket Ground.

For enquiries please call 03 93497477 or email cpd@aco.org.au.
