

Become a friend of the NVRI

Show your support of research in vision and eye care

The National Vision Research Institute (NVRI) undertakes internationally recognised research to help understand the complexities of vision and its disorders. It carries out basic science, transitional and clinical research and it committed to understanding vision disorders and explaining how the brain processes vision, to advance solutions to support those with vision loss.

Established in 1972, the NVRI is the research arm of the Australian College of Optometry (ACO) and has been at the forefront of vision research for 50 years. Its work is made possible through philanthropic support, research grants and the generosity of both industry and individual supporters.

By becoming a Member or making a donation, you can support the NVRI to continue their important vision research. Your membership also provides the opportunity to further understand the NVRI's research work via our publications and online news.

Your contribution will help the NVRI to carry on its valuable work in preserving sight and preventing blindness.

Be a part of cutting-edge vision research

Become a Member and/or donate to support our work. Donations are fully tax deductible.

Apply for the NVRI membership for the year ending 31 December 2024 and/or make a donation by filling out the application.
